

Cloud Risk Services

Cloud computing has significant implications for the privacy of personal information as well as for the confidentiality of business and governmental information. A principal goal of the Treadstone 71 Cloud Risk Services is to identify privacy and confidentiality issues that may be of interest or concern to cloud computing participants. While the storage of user data on remote servers is not new, current emphasis on and expansion of cloud computing requires a trusted partner to review the actual and potential privacy and confidentiality consequences associated with storing your mission critical information in the cloud. -- *World Privacy Forum Cloud Privacy Report*

Cloud computing has significant implications for the privacy of personal information as well as for the confidentiality of business and governmental information. Your private information and confidentiality risks vary significantly with the terms of service and privacy policy as dictated by the cloud service provider. For some types of information and some categories of cloud computing, privacy and confidentiality rights, obligations, and status may change when information is disclosed to a cloud provider. Disclosure and remote storage may have adverse consequences for the legal status of or protections for personal or business information. The location of information in the cloud may have significant effects on the privacy and confidentiality protections of information and on the privacy obligations of those who process or store the information.

Cloud Risk Services from Treadstone 71

Information in the cloud may have more than one legal location at the same time, with differing legal consequences. Legal uncertainties make it difficult to assess the status of information in the cloud as well as the privacy and confidentiality protections available to users. Responses to the privacy and confidentiality risks of cloud computing include better policies and practices by cloud providers, changes to laws, and more vigilance by those who use or may be looking to use cloud computing.

Treadstone 71 offers:

Comprehensive Threat Analysis

Enterprise Risk and Cloud Governance

Compliance, Privacy and eDiscovery
Incident, Recovery, Sustainability and
Resiliency

Service Support and Delivery Assessment
Jurisdictional Review

Service Level Agreement validation

Cloud Data Protection Assessments

Service Level Management Review and
Analysis

Policy and Procedure Maturity Assessment

Contract and Terms of Use Assessment

Regulatory and Statutory Compliance Review

Data Location - Provisioning/De-Provisioning

3/21/2011
