

Interim CISO Services

Treadstone 71 provides information security leadership service that is designed to assess and benchmark your organization's information security and network security posture. The Interim CISO Service is customized and scaled based on the size of your organization and industry type. Treadstone 71 provides a structured approach used to measure security and develop the strategic security direction for organizations using internationally recognized information security standards. The Treadstone 71 Interim CISO service focuses on prevention by proactively examining your security infrastructure prior to remediation efforts. In addition, Treadstone 71 measures compliance with the ISO27001/2/5, the CISSP Common Body of Knowledge, Common Criteria, and NIST Security Standards non-inclusively. Treadstone 71 utilizes standards for gap analysis and risk assessment such as the National Security Agency's Information Assurance Methodology non-inclusively, while incorporating best practices from BITS & FFIEC (for financial services) and OCTAVE® for asset intensive requirements.

Our risk-based, holistic approach ensures rapid review of your current posture while setting the building blocks for increase maturity and risk optimization.
